

Blue Cedar Enhance Service for BlackBerry Dynamics

Enable App Protection Policies

The Enhance Service for BlackBerry Dynamics automates the process of adding the following BlackBerry mobile application management (MAM) and security features in mobile apps.

- **BlackBerry Dynamics:** Enable MAM and app security controls such as identity & authorization, secure storage, secure communications, identity & access management, single sign-on authentication, secure access to corporate data, and app-level controls for IT.
- **BlackBerry App Configuration:** Configure app management for apps written to AppConfig.org standards.
- **BlackBerry AppKinetics:** Securely exchange data and commands, such as transfer file, open URL, and send email, between BlackBerry Dynamics-enabled apps.
- **BlackBerry Launcher:** Switch quickly between BlackBerry Dynamics-enabled apps, including BlackBerry productivity apps such as BlackBerry Work, BlackBerry Access, BlackBerry Connect, BlackBerry Edit, BlackBerry Notes, and BlackBerry Tasks.
- **BlackBerry Persona:** Determine a user's current risk level, using AI-driven threat protection, and take action to adapt the behavior of BlackBerry Dynamics-enabled apps to that level of risk.
- **BlackBerry Watermark:** Add a watermark to app screens of BlackBerry Dynamics-enabled apps to deter users from leaking data via screenshots or photos.

Features

- Support for iOS and Android apps
- Modify mobile apps built on any development framework
- Enable manageability by BlackBerry UEM
- Add the following MAM and security features.
 - BlackBerry Dynamics
 - BlackBerry App Configuration
 - BlackBerry AppKinetics
 - BlackBerry Launcher
 - BlackBerry Persona
 - BlackBerry Watermark

The Blue Cedar Enhance Service for BlackBerry Dynamics makes it easy to modify mobile apps to be manageable by BlackBerry Unified Endpoint Management (UEM) without requiring source code access or having to write code.

Modify Apps Built On Any Framework

The Blue Cedar Enhance Service for BlackBerry Dynamics uses patented technology to add BlackBerry MAM and security functionality to iOS and Android mobile apps. The Enhance Service rapidly scans tens of thousands of API calls in a mobile app's code, from the app layer to the network layer, to find points where the new functionality should be integrated. This depth of visibility means that the Enhance Service can be used with mobile apps developed on any app framework, including the popular ones shown below.

Execute Complete Mobile App Deployments

Orchestrate entire mobile app deployments from within the Blue Cedar Platform. Use the Enhance Service for BlackBerry Dynamics with other services, such as app import, app signing, and app distribution, to build workflows that minimize deployment overhead and automate mobile app deployment tasks. Integrations to your CI/CD pipelines, security tools, and mobile technology stack reduce the overhead of manually coordinating mobile app deployment tasks across multiple teams and complex toolchains.
